ALLIES CHECK DRIVE OF GERMAN HORDES

DRIVE STOPPED QUICKLY BY ALLIES EXCEPT AT ISOLATED POINTS.

(By the Associated Press)

With American Army on Marne, July 16 (1:30 P. M.)—Word received this morning from the battle front east of Rheims, shows the allied defense is not only still holding up German attempts to advance, but appears to have broken the spirit of the enemy. Reports from one end of the line to the other show that except for a few minor localities the great German offensive so far has been a complete failure.

FIGHT CONTINUES FURIOUSLY

London, July 16, (10:00 A. M.)—The Germans this morning continued their attacks against the French line in pursuance of their offensive, according to information reaching here. The information indicated that the offensive remains held up, attacks up to this time having been everywhere repulsed with heavy losses. Between Reuilly and Dormans the enemy threw six bridges across the Marne but at no place succeeded in penetrating over four miles into French positions.

AMERICANS RECAPTURE TOWNS.

London, July 16.—American troops have recaptured Foseoy and Crezancy, towns on the south bank taken by the Germans when they crossed the Marne yesterday.

Bombarding Paris Again.

Paris, July 16.—Long range bombardment of Paris was resumed this morning.

COUNTER ATTACKING GERMANS.

Paris, July 16 (11:30 A. M.)—The battle continues violently, especially south of the Marne in the Chatillon region. Except for one sector south of the Marne there is no change in the situation. American and French troops are counter attacking magnificently and taking many prisoners, according to the war office statement today.

British Improve Position.

London, July 16.—In an operation east of Amiens the British last night improved their line after sharp fighting in the Villers-Bretonnoux sector, the war office announces. German guns showed activity southwest of Albert.

AMERICANS MOW DOWN GERMANS

MEET AND REPEL CHARGING HORDES IN TRULY MAGNIFICENT MANNER.

(By the Associated Press)
Where Americans are, etoainnn
With American Army on Marne, July 16.—At one point of the offensive where Americans are fighting they organized a small counter-attack late yesterday on the flank of the salient established by the Germans and drove them out in short order in hot fighting. The Germans were allowed to come through but when they tried to cross the open fields up a slight grade American machine gunners and infantry mowed down the advancing formations, the enemy breaking and retiring in many places.

Casualty List.
Washington, July 16.—Today's army casualty list showed:
Killed in action 14
Died of wounds 8
Died of disease 3
Died of accident and other causes 1
Wounded severely 53
Missing in action 22

Marine Casualty List.
Washington, July 16.—Marine corps casualty list today shows:
Killed in action 42
Died of wounds 10
Wounded severely 17
Missing 18
Sergeant Claude Edwards, Sallisaw, Okla., is among the wounded severely in action.
Corporals Frank H. Collins of Edmond, Oklahoma, and Frank H. Ralft of Wellston, Oklahoma, were killed in action; Private Ralph Perry, Cushing, Oklahoma, died of disease. Sgt. Geo. D. Grigsby of Lookaba, Oklahoma and Private Hubert T. Stewart of Woodward, Oklahoma, are wounded severely.

Norway has arranged for a standard mixture of 75 per cent margarine and 25 per cent Danish butter to be called "statmargarine."

Siam produces more than forty varieties of rice, some of which are ripened in seventy days from planting, while others require six months.

HUN DRIVE NETS LITTLE GAINS

ALLIED LINE HOLDING WELL. HUNS FAR BEHIND THEIR SCHEDULE.

(By the Associated Press)
Furiously launching new attacks against the allied line on the Marne front from Chateau Thierry to Rheims the Germans are continuing their efforts to break through French and American defenses. They progressed during the night but it was comparatively slow. The enemy after crossing the Marne between Dormans and Chatillon has reached the villages St. Agnan, La Chapelle and Menthedon, approximately a mile and three-quarters south of the river but on the outskirts of these towns they have been held up. Just to the northeast they managed to traverse Bouquigny wood but on the southern side they have been stopped. The deepest penetration along this line is three and three quarters miles. From Chatillon to Rheims there is no change in the situation. Germans are now over twenty-four hours behind their schedule.

Near Fosse the Americans hurled the enemy back to the north bank of the Marne, taking between 1,000 and 1,500 prisoners including an entire brigade staff. East of Rheims the Germans have been smashed, completely by French resistance.

On the remainder of the western front and in Italian and Macedonian theaters the fighting has been confined locally.

American Hospital Bombed.
Paris, July 16.—German aviators last night bombed an American Red Cross hospital at Jouy killing two enlisted men and injuring nine among the hospital personnel.
Situation Satisfactory.
Washington, July 16.—The general situation this morning is regarded as satisfactory, says the war department statement issued today based on reports from Generals Pershing and Bliss, confirming press reports of yesterday's fighting. The statement warns the public that great pressure of reserves is still to be looked for, however.

Little Halli, keeping up the fashion among nations of the past two years has declared war on Germany. While this black republic can't do much in the war, its action shows how universal is the hatred of the Huns and which after the war means that the German nation will have no friends left. No nation will want to carry the stigma of being the friend of such barbarians and they will have rough sledding for many years with everybody against them.

America is proud of the magnificent record her soldiers are making in the latest German drive, but is not surprised. Free orn Americans have always proved themselves determined fighters, excelled by none on earth. It is only the Huns who are surprised, for they had been told that the Americans were so greedy to make money that they would never amount to anything as soldiers. It is only the Huns who are surprised, for they had been told that the Americans were so greedy to make money that they would never amount to anything as soldiers. It is a settled fact that it is up to the Americans to win the war and the record now being made proves that they are equal to this stupendous task.

BIGGER AND BETTER REPORT ON ADA FAIR THIS FALL WATER SUPPLY

DIRECTORS OF ASSOCIATION PLAN BIG EDUCATIONAL EVENT.

A bigger and a better fair is what the directors of the Pontotoc County Fair and Breeders Association say will be held this fall, the date being September 11, 12, 13, and 14. At a meeting of the directors of this association O. N. Walker was elected general manager of the fair and J. B. Hill assistant manager. With these two experienced live wires in charge, the directors know that a big fair is assured.

The manager and assistant manager were instructed to get up a premium list for both agricultural products and live stock. This list is to be much larger than ever before. More cash prizes than in years past and some prizes in merchandise will be offered. All cash prizes will be paid in War Savings Stamps, as the State Council of Defense advises.

Messrs. Walker and Hill will begin at once work on the grounds. Already the grandstand has been put in order. The buildings are to be remodeled, and the grounds put in first class condition for the racing and exhibit of all products. A famous band will be employed, and entertainments of various kinds brought here.

More than ever are fairs essential now that the United States has become the feeder of the world. It is not only essential that the most of everything be raised, but it is also necessary that quality as well as quantity be considered. The fairs will help this along, so say the farmers who have in the past taken part in these exhibits.

Mr. Walker feels optimistic over the outlook. He believes that the citizens of this county are more alive to the necessity and advantage of fairs than ever. Mr. Hill says that interest among the breeders of live stock and the raisers of good crops are anxious to exhibit their products this fall. While the corn crop is being cut short by the drought, the other crops promise good returns and prize winning exhibits.

GERMAN ARROGANCE AT PEACE CONFERENCE

London, July 16.—(By Associated Press Correspondent recently in Rumania).—The business of making peace with Germany is not a pleasant one for the persons who have to conduct the negotiations. The Rumanian delegates who went down from Jassy in March at the invitation of the Germans found no warm welcome or pleasant hospitality awaiting them at Bucharest. "We were treated as less than the dust," said one of the delegates in picturesque Rumanian metaphor, on his return to Jassy.

These were merely the preliminary and informal negotiations. The formal parleys did not begin until some days later. The delegation which undertook these preliminary conversations was headed by M. Papinuri, former Rumanian Minister at Constantinople, and his associates included representatives of the principal political parties.

Although they had come to Bucharest at the personal invitation of the German Commander-in-Chief, Field Marshal von Mackensen could give them only five minutes of his time. He kept them standing and treated them with deliberate coldness. His attitude was summed up by his declaration: "You ought to be glad that we are prepared to discuss peace with you at all, instead of merely imposing it upon you. We extend you this favor only out of consideration for the heroic resistance of your army."

At the end of the five minutes which Von Mackensen allotted the delegates, they were turned over to some subordinate officer, who discussed with them whether the abdication of the King ought to be included in the peace terms. Only the most indefinite proposals could be obtained from the German officers, and it was plain from Von Mackensen's conversation that he had very limited powers in these matters.

Neither on territorial questions nor regarding the demobilization of the Rumanian army could he speak definitely, and it was stated that conversations with "German political personages" would be necessary to decide these subjects.

It was very evident to the Rumanian delegates that these preliminary conversations had been asked for by Von Mackensen merely with a view to bulldozing and brow-beating Rumania. The Field Marshal, in a speech full of braggadocio, said that his army was fully prepared for business, and that unless an immediate understanding was reached he would begin "a terrible offensive." On the other hand, if Rumania yielded, he promised that his troops would be withdrawn and sent to another front.

He inquired specifically as to the whereabouts of the French, British and American Missions to Rumania, and it appeared to the delegates that he hoped to be able to somehow to bag these missions and make them prisoners.

The subordinate German officer gave the Rumanian delegates assurance of generous treatment on a number of points, but none of these assurances brought any result in the formal negotiations which followed a few days later.

BENHAM ENGINEERING CO. GIVES SUMMARY OF SURVEY OF PRESENT SYSTEM.

Ada, Okla., July 15, 1918. To the Citizens of Ada: In answer to the many inquiries concerning the water supply of the City of Ada: I offer the following report, from the Benham Engineering Co. without comment, other than to state that all the precautionary measures suggested in this report have been complied with.

P. H. DEAL, Commissioner of Public Works and Property.

P. H. Deal, Commissioner of Public Works and Property, Ada, Okla. Dear Mr. Deal:

In accordance with your request that we make examination and investigation of the Byrd's Mill Water Supply and Pumping Station with a view to furnishing more water to the City of Ada, Okla., beg to submit the following report of our investigations. In making our investigations we inspected and determined the actual operating conditions of the pumps and turbines and measured the flow of the Springs. We find that our Mr. Bates took the rise of the spring in May, this together with measurements taken by Mr. Richards and myself has determined the flow of the Byrd's Mill Springs to be as follows on he dates indicated:

May, 1918—Mr. Bates' measurements show 9,000,000 G. P. D.

June 25, 1918—Mr. Richards' measurements show 5,500,000 G. P. D.

July 3, 1918—Mr. Long's measurements show 5,300,000 G. P. D.

These measurements do not include the small amount of water that is leaking out under the reservoir walls at the springs. The measurements taken by Mr. Bates was prior to the filling of the Spring with mud and debris the fore part of June, and was taken approximately six weeks prior to those taken by Mr. Richards and myself. The measurements taken by Mr. Richards and myself were only eight days apart and these measurements show practically the same results. Our measurements show the spring to vary greatly and this can be expected. The drilling of oil wells into the artesian formation from which it is evident this spring is supplied with water, will affect the source of supply of these springs and will decrease the flow of the spring. We understand that the Cement Company have drilled a well at their plant that has struck artesian water, this might indicate the same source of supply and would of course affect the springs. It is our opinion that the flow of the springs will continue to vary.

Our investigations of the turbines show the north turbine to be operating under a total head of 65 feet and the south turbine under a total head of 66 feet. There is available a total head of 70 feet. The loss in each case is due to inability to develop full vacuum in the draft tubes on account of poorly packed stuffing boxes. In the case of the north turbine this represents a power loss of 7% and to the south turbine 6%. This is easily recognized by the extreme milky appearance of the water in the tail race, showing the presence of a large amount of air. The development of the power now being lost can be accomplished by careful packing of the stuffing boxes and a careful cleaning and widening of the tail race. The addition of 6% more power will be a material help but will not solve the difficulty.

The new concrete flume line enables the water from the springs to reach the turbines with less than one foot loss of head and while this flume is leaking at several points, the leaks are very small and the power lost both from the loss of head and loss of water is less than 1%.

Our investigation of the pipe line from Byrd's Mill to Ada shows same to be in very poor condition and we doubt if this pipe line will stand 100 pounds per square inch pressure for any continued period of time. The pipe line is approximately 65,000 feet long and same is constructed 12 in. of Mathewson Joint steel pipe. From testing the operating conditions at the pump we find that with the pumps operating at 1160 R. P. M. the discharge pressure was 97 lb. or 222 feet with the pumps stopped the static head was 40 lb. or 92 feet showing a friction loss in the pipe line of 130 feet or approximately 2 feet per 1000 feet of pipe line, this shows the discharge capacity to be slightly in excess of 700 G. P. M. or approximately 1,000,000 G. P. D. This data was taken during the middle of the day, but it is our opinion that the City of Ada is now using approximately 1,000,000 gallons per day and more than this amount should be available. It is very probable that a considerable portion of this amount is leakage due to the bad condition of the mains in the City of Ada and the line to Byrd's Mill.

In order to deliver 800 G. P. M. through the present 12 in. pipe line to the City of Ada at an adequate domestic pressure in the City such as is obtained with the use of the elevated tank and tower, it will require a pressure of approximately 150 pounds per square inch at the Byrd's Mill Pumping Station. The 12 in. pipe line to Byrd's Mill will not stand this pressure. This same pipe line will deliver 500 G. P. M. or 700,000 G. P. D. into the elevated tower in Ada with a pressure of 120 pounds at Byrd's Mill Pumping Station. The City of Ada, however, is requiring more water than can be supplied by the present 12 in. pipe line from the Byrd's Mill Pumping Station.

We have inquired of the manufacturers their ratings of the turbines at Byrd's Mill Pumping Station and the

Most people find foods cooked with MAZOLA more wholesome

FOODS fried in Mazola are always light and wholesome—easy to digest

Mazola—the pure oil from corn—just "crisps" over the food—giving it a delicate brown richness.

Never takes up odors or flavors—can be used over and over—to the very last drop. No smell of frying in the house with Mazola.

Delicious as a salad dressing. Many prefer it to olive oil—costs less than half as much. And it saves animal fats.

This Sauce Tartare is Perfect in Flavor and Consistency

SAUCE TARTARE

For fried fish, oysters, crabs, scallops or entrees

Make a Mayonnaise as follows:

Yolks of 2 eggs 1 teaspoon salt

2 cups Mazola 1 teaspoon mustard

2 tablespoons vinegar Dash cayenne

Juice of 1 lemon

Mix the seasonings and add to the beaten yolks of the eggs. Beat with a small wooden spoon or silver fork. At first add the oil drop by drop, beating vigorously. When too thick to beat add 1 teaspoon vinegar. Continue to add the oil slowly, alternating with the vinegar and lemon juice, until at least 1/2 cup of oil has been added. Onion juice may be added if desired.

Then take 2 tablespoons each of capers, olives and gherkins; tablespoon of parsley, and 1/4 tablespoon of onion juice, or finely chopped shallots or white onion. Chop very fine. Fold into 1 cup of above Mayonnaise and serve cold.

If you want to be sure of a pure, golden oil—always the same, delicate and delicious for all cooking and salad uses—see that you get Mazola. Mazola is always uniform. Its preparation is scientific and exact.

For sale in pints, quarts and gallons. (The large sizes are especially economical). Get a can from your grocer today.

Ask your grocer for the valuable Cook Book especially prepared for Mazola users—or write us direct. FREE.

MAZOLA

The Delicious Salad and Cooking Oil
Produced by the CORN PRODUCTS REFINING CO.
P. O. BOX 161 NEW YORK

following is a copy of their letter in reply:

The Benham Engineering Co., Oklahoma City, Okla.

Gentlemen:

We are in receipt of your favor of June 26th referring to the two special 10 in. horizontal turbines which we furnished to the City of Ada, Oklahoma in 1911, under our shop order XX-938. Beg to advise that the maximum capacity of each of these turbines under 68 ft. head would be 50 h. p. You could not develop more than 50 h. p. with either of these turbines. The proper speed at which to run these turbines to obtain the highest efficiency is 1100 R. P. M. As long as the head of water is maintained at 68 ft., the speed should be kept constant regardless of the amount of power developed.

We give you below table showing the quantity of water used for developing the various powers for each of these turbines:

Full power, 50 horsepower, 78.0 efficiency, 500 c. f. m.

9 full power, 45 horsepower, 82.5% efficiency, 424 c. f. m.

8 full power, 40 horsepower, 80.6% efficiency, 388 c. f. m.

7 full power, 35 horsepower, 78.0% efficiency, 350 c. f. m.

6 full power, 30 horsepower, 75.4% efficiency, 310 c. f. m.

The above you will understand is for one turbine. The results shown above are those which may be expected from these turbines when new and properly installed. After being in operation for seven years there has been considerable rust and scale formed on the operating parts which has reduced the efficiency. As to the present efficiency of these turbines: This would be a guess only, but we would say that you might probably expect to be receiving now in the neighborhood of 2% to 3% less efficiency than when the turbines were new.

Trusting this information will cover your requirements and assuring your communications at all times our very best attention, we beg to remain,

Yours respectfully,

THE JAMES LEFFEL & CO.

Per E. J. Sanderson, Sales Manager

Turbine Dept.

Our measurements show that approximately 5,500,000 G. P. D. is available from Byrd's Mill Springs to operate these turbines and supply the pumps. At the maximum efficiency of these turbines which is at 9 load the turbines will develop 45 H. P. at 1100 R. P. M. under a total head of 68 feet and this requires 424 cu. ft. per minute or 4,500,000 gallons per day. The pumps are designed to deliver 625 G. P. M. against a total head of 220 feet at a speed of 1100 R. P. M. which at 70% efficiency will require 50 H. P. to drive same. It is very probable that the pumps will not develop more than 55% efficiency. As the City is using approximately 700 G. P. M. this is above the capacity of the pumps. Therefore in delivering 700 G. P. M. the pump will not develop the required head as this requires a higher speed and more driving power. The turbines will not develop a higher speed or more power unless the head on the turbines is raised. As before stated the turbines are even now operating under a head less than is available and therefore the power developed can be increased to some extent, but this will not solve

the problem. Sufficient water is available from Byrd's Mill Springs for operating one turbine at its best rated efficiency which requires 4,500,000 G. P. D. But the pumps are overloaded by the increased demand of the City for water and it would be impossible to increase the capacity of Byrd's Mill Pumping station to any marked extent by the use of the present equipment, for the following reasons:

1. The pipe line to Ada is not large enough and will not stand the high pressure that would be necessary to force the required amount of water through same and maintain adequate domestic pressure in the City of Ada.

2. The capacity of your present pumps and turbines has been exceeded by the demand for water and these units will not develop the pressure for delivering through your present pipe line enough water to meet this demand and maintain adequate domestic pressure.

3. There is not sufficient water available at this time from Byrd's Mill Springs for operating larger turbines and pumping units.

The Byrd's Mill Pipe Line is too small and of very poor material and should be replaced with a cast iron pipe line at least 16 in. in size. A 16 in. pipe line would reduce the operating head at Byrd's Mill Pumping Station approximately 45 lb. for a capacity of 800 G. P. M. but we do not recommend its installation at this time for two reasons: first, its extreme high cost under present conditions; second, the uncertainty of the flow of the springs which seems to be varying greatly.

In order to obtain the maximum results from the equipment and springs at Byrd's Mill at this time we recommend the following:

1. That both pumps and turbines be given a thorough overhauling at the Byrd's Mill Pumping Station and that the stuffing boxes on the turbines be carefully and properly packed.

2. That the City purchase two vacuum gauges and install same on the draft tubes and that the operator be instructed to keep the stuffing boxes and all leaks, water and air tight in order that the maximum vacuum may be obtained in the draft tubes.

3. That the tail race be widened to a minimum width of six feet and that same be cleaned out to the extent necessary for the bottom of the draft tubes to be submerged four inches when the turbines are not operating.

4. That the reservoir at the Byrd's Mill Springs be cleaned out in so far as it is possible to do so with a view to a possible increase in flow and that the operator be instructed to shut down the flume gate and take the time of a 6 in. rise of the Spring once a week, being careful that the water level is touching the outside walls when he takes this time.

5. That a careful examination be made of all valves along the Byrd's Mill pipe line to see that all valves are wide open, and that there are no hidden valves that might be partially closed.

The above recommendations when carried out will help the situation to some extent but we feel sure will not solve the problem. Since we can not with the present equipment and pipe

line supply the demand for water, our only recourse is to reduce the demand, and for this purpose we recommend the following:

1. That a thorough and systematic effort be made to stop all leakage in so far as possible.
2. That all consumers be placed on meters and that all meters be examined to see that same are operating properly.
3. That all connections to flush-tanks in the City be examined to determine if water is being wasted

Have you a Musical Car?

Does it squeak and wheeze and whistle every time you run it out? Then run it over here and let's see what's the matter. It may need HAVOLINE OIL and Havoline Greases.

MONEY TO LOAN

The Georgia State Savings Association has ample funds to loan on good, well located city property in Ada; good contract, pay-by-the-month plan. On a long time loan of \$1000.00 you can save approximately \$100.00 on our plan of payments. Come in and let's talk it over

J. G. WITHERSPOON

(119 S. Broadway)

FARM LOANS—INSURANCE—REAL ESTATE

therein. Flushtanks should discharge once every 24 to 48 hours.

We have known of instances where the water consumption has been reduced from 30 to 50% by placing all consumers on meters and keeping the meters in operation. And in all cases the installation of meters has increased the revenue of the city from the sale of water. It is our opinion that the City can reduce its consumption at least 20% by the installation and keeping in proper repair of meters on all consumers, and at the same time receive additional revenue.

We do not know the exact layout of the mains in the City of Ada but we feel sure that a very satisfactory arrangement could be worked out which would materially aid it not solve your water problem at a relatively small expense. Our suggestion is to use the small elevated tank and connect thereto the necessary mains for furnishing industries with water from the reservoir east of the City. The water from the reservoir, while not fit for domestic consumption, is far more desirable for industrial uses than the Byrd's Mill water. By the furnishing of industries with water from the reservoir we estimate that the amount of water required from Byrd's Mill would be reduced by 300,000 G. P. D. or more.

In order to increase the supply from Byrd's Mill through the present pipe line and furnish adequate pressure for domestic uses and fire protection we recommend the City construct at a convenient location near the City of Ada a receiving basin and electrical pumping unit booster station with a capacity of 1,000 G. P. M. against a total head of 250 feet.

The booster station should consist of a two stage horizontal centrifugal pump direct connected on the same base to the necessary motor. Same would be connected to the necessary pole line and would require a small switchboard with the necessary electrical equipment for operating same. The station would be a compact unit and it would be comparatively easy to move or change the location should this ever become necessary.

For the present we thought that the pump suction could be connected to the Byrd's Mill pipe line and by the use of the necessary valves the discharge could be connected to the same line and discharge into the mains and elevated tank, thereby making it necessary to operate this pump only a portion of the day to fill the tank and during the remainder of the day the connections could be changed so that the Byrd's Mill Pumps would be direct connected to

the City during which time the City would draw its surplus from the tank until same became low and it was again necessary to start the booster pump, but our calculations show that it would be impossible to supply through the present pipe line to the suction of the booster pump the 1,000 G. P. M. necessary by means of the present equipment at Byrd's Mill Springs. The present equipment and pipe line will supply more than one million gallon per day, but it would be necessary to operate a pump of this capacity continuously, therefore we think at least a 1,500,000 G. P. D. pump should be used. To use a pump of this size will require a receiving reservoir at the booster station. The Byrd's Mill pipe line would discharge in this reservoir. The suction of the booster pump would be connected thereto and the standpipe could be filled therefrom from time to time as necessary. We would recommend a concrete line earthen reservoir of approximately 500,000 gallons.

Our estimate of cost of this installation complete is as follows:
Booster Station including pump, motor, suction and discharge piping, valves, switchboard and wiring, \$5,000.00.
500,000 gallon concrete line earthen reservoir, \$5,000.00.
Total, \$10,000.

This station could be located along the highway some half mile south of the brick plant. Some arrangement could possibly be made for electric current from the power company in connection with the power now being purchased at the city reservoir. It would cost at 1 1/2¢ per K. W. approximately 1 2-3 cents per 1000 gallons for current to operate the pump which at the rate of 1,000,000 G. P. D. would be \$16.67 per day or approximately \$500.00 per month.

In conclusion, we wish to state that the City of Ada has outgrown its water system, and while the recommendations as outlined will aid the situation for the present, yet we realize the ultimate solution of your water problem will require the expenditure of a large amount of money as the whole system of mains in the City are inadequate for supplying even domestic use and give the very poorest of fire protection. The main are laid too shallow and the freezing of same occurred last winter. The Byrd's Mill Pipe line is far too small and the turbines and pumps are seriously overloaded. Our recommendations have been made with the idea of meeting present conditions with the expenditure of the least possible amount of money. Most cer-

tainly conditions will be far more favorable for construction work on a large scale after the war.

We think the wise thing to do at this time is to provide for the present, with the idea of making improvements so that same can still be used in the ultimate solution of your water problem. The keeping of an accurate record of the flow of Byrd's Mill Springs as outlined above will enable the City to determine how much this flow varies and to what extent the City will be able to depend on same for its future water supply. It looks at this time like it will only be a question of time until the City will require the whole flow of Byrd's Mill Springs to meet the demand for water, and that it would be necessary to do away with the use of water power for pumping. We might add along this line that it would be possible to construct a gravity flow line from Byrd's Mill Springs to a point approximately one mile south of Ada, and that a pumping station could be located at this point to put the water into the elevated tank and city mains. By the installation of the proper flow line and pump station the whole flow of the Springs could be delivered into the City of Ada. This installation, however, would cost probably \$500,000.00 at this time.

We might add that the installation as installed under our supervision during the past year in along the line of permanent and needed improvements and will work in nicely with the ultimate solution of your water problem. The 400,000 gallon elevated tank is a necessity for the City of Ada and will give adequate pressure for domestic use and fire protection and will provide a good storage supply. The flume line had to be constructed to even continue the use of the present equipment at Byrd's Mill Pumping Station as the old wood flume was nearly gone. The concrete flume will not be a loss even if the Byrd's Mill Pumping Station is abandoned as should a gravity line be constructed to the City of Ada, this can be used for approximately the first mile of same, and further if it was decided to construct an electrical driven pumping station at Byrd's Mill this flume line would be the logical suction line for the pumps and would thereby eliminate the construction of 4,400 feet of discharge main to the City of Ada.

We will be glad to make further detailed investigation for you at any time. Very truly yours,
BENHAM ENGINEERING CO.

Pet Seagull, 35 Years Old Dies.

"Charlie," a pet seagull belonging to the bishop of Ely, has died, after having been an occupant of the Palace gardens 28 years. It was caught on the Dorset coast 35 years ago.—From the Mail, Paris.

JUDGE HART'S PLATFORM

In a signed statement in the Seminole County News Judge Hart says: "Aside from the benefits of having the District Judge reside in Seminole County, the County can save from \$1,000 to \$1,500 each year in money paid out by this county for expenses of our County Attorney and witnesses going to Ada on Habeas Corpus and injunction proceedings."

If this be true Pontotoc County would save \$5,000.00, by re-electing Judge Bolen, who resides in Pontotoc County.

A. C. CHANEY,
Chairman Bolen Club.

Poor Man!

According to Plutarch, Cato said that in his whole life he most repented of three things. One was that he had trusted a secret to a woman; another, that he went by water when he might have gone by land; the third, that he had remained one whole day without doing any business of moment.

When you feel lazy, out of sorts and yawn a good deal in the daytime, you can charge it to a torpid liver which has allowed the system to get full of impurities. HERBINE cures all disorders produced by an inactive liver. It strengthens that organ, cleanses the bowels and puts the system in good healthy condition. Price 60c. Sold by Bart Smith.

So Picture Won't Fail.

When hanging pictures always hang them with the face to the wall at first, then turn them without unhooking the wire. This leaves the wire twisted up at the hook, and when hung this way the jarring of the house will have no effect on them.

If your appetite is poor and your stomach and bowels out of order the remedy you need is Prickly Ash Bitters. It cleanses the system of bilious impurities, sharpens the appetite and makes you feel fine. Price \$1.25 per bottle.—Gwin & Mays Drug Company, Special Agents.

If you feel "blue," "No account," lazy, you need a good cleaning out. HERBINE is the right thing for that purpose. It stimulates the liver, tones up the stomach and purifies the bowels. Price 60c. Sold by Bart Smith.

Let a Want Ad get it for you.

ENTIRE COMMUNITY IS AMAZED OVER IT

Seymour Gains 30 Pounds On Tanlac And Trouble of 15 Years' Standing Ended.

"I simply can't find words to tell you how much Tanlac has been worth to me," said Charles Seymour, a well-known metal polisher living at Pleasant View, Colo., recently.

"I had been a sick man for fifteen years," he continued, "and had fallen off until I weighed only one hundred and fifteen pounds. I suffered from the effects of grippe, had pleurisy and stomach trouble and something like bronchitis. No one thought I would ever get well and as for myself, I had no idea I could live much longer. In fact, I was given up to die and I was in so much suffering that it would have made little difference to me if I had. The people out where I live all know what an awful condition I was in and the whole community is surprised at my recovery."

"I have gained all of thirty pounds by taking Tanlac and feel that I have a new hold on life. My stomach trouble and everything else I suffered from has disappeared. I can eat and sleep like a school boy and am so strong and well that I can do as much work as I ever could. I can't help praising Tanlac and I wouldn't be without it for any amount of money. My first bottle made me feel better and I kept taking it until it made a new man of me. My wife also took several bottles and it relieved her trouble and built her right up. I would buy Tanlac if it cost me five dollars a bottle and think it cheap at that. If anybody wants to get it direct from me what I think of Tanlac all they have to do is ask me, I'll tell the world what it is and how it has saved me."

Tanlac is sold in Ada by Gwin & Mays Drug Company, and by leading druggists and dealers everywhere.

Sentiment Uttered by Many.

The origin of the expression "In union there is strength" is not known, but the sentiment in various forms has been current a very long time. A Latin author of ancient times said: "By union the smallest states thrive, by discord the greatest are destroyed." The American author of "The Flag of Our Union" said: "United we stand, divided we fail."

WOMAN'S STATEMENT WILL HELP ADA.

I hated cooking because whatever I ate gave me sour stomach and a bloated feeling. I drank hot water and olive oil by the gallon. Nothing helped until I tried simple buckthorn bark, glycerine, etc., as mixed in Adler-ika, because it flushes the ENTIRE bowel tract completely. Adler-ika relieves ANY CASE sour stomach, gas or constipation and prevents appendicitis. The instant action is surprising. —Gwin & Mays Drug Company.

Well Adapted for Its Work.

Speaking of necks, could you imagine one better suited to the habits of its owner than that of the hog? The hog roots in the ground for its food—in the wild state. Its neck must be thick and stout for shoving the snout into the earth. So the neck of the hog is built exactly as it should be built for enabling the animal to carry its snout along the ground in picking up or rooting up its food supply.

SURGEONS agree that in cases of Cuts, Burns, Bruises and Wounds, the FIRST TREATMENT is most important. When an EFFICIENT antiseptic is applied promptly, there is no danger of infection and the wound begins to heal at once. For use on man or beast, BOROZONE is the IDEAL ANTISEPTIC and HEALING AGENT. Buy it now and be ready for an emergency. Price 25c, 50c, 1.00 and 1.50. Sold by Bart Smith.

Words Frequently Misspelled.

Note from the Outlook: "What words are most frequently misspelled in the papers? Two candidates for the honor have good claims. 'Haley'—'hailed into court'—often appears as 'hailed.' 'Identify,' for some curious reason, is frequently printed 'Identify.' 'Superceded,' 'ecstasy' and 'develope' might receive honorable mention in the list."

If no weather saps your energy and you can't work well, it is sign that your system is full of bilious impurities. You will be sick if you do not do something. Take Prickly Ash Bitters, it cleanses the blood, liver and bowels, restores strength, vim and cheerful spirits. Price \$1.25 per bottle.—Gwin & Mays Drug Company, Special Agents.

Value of Old Shoes.

From one ten of old shoes can be extracted metals to the value of \$4.70; grease, \$7.25; animal black, \$50; sulphate of ammonia, \$22.50; a total of \$84.45, or about 15 cents a pair. The grease is a good lubricant and the animal black is said by M. C. Lamb, the English chemist who is responsible for these figures, to be equal to the best of bone black.

In every home where there is a baby there should be a bottle of McGEE'S BABY ELIXIR. It may be needed at any time to correct sour stomach, wind colic, diarrhoea or summer complaint. It is a wholesome remedy, contains no opium, morphine or injurious drug of any kind. Price 25c and 50c per bottle. Sold by Bart Smith.

ANNOUNCEMENTS

DISTRICT AND COUNTY

The News is authorized to announce the following gentlemen as candidates for the respective offices named, subject to the Democratic Primary:

For State Senator:
LUTHER HARRISON

For District Judge:
J. W. BOLEN
D. G. HART

For County Attorney:
WAYNE WADLINGTON.

For County Treasurer:
D. W. SWAFFAR

For Sheriff:
BOB DUNCAN (re-election)
I. R. GILMORE

For County Tax Assessor:
NICK HEARD (Re-election)

For County Clerk:
MILTON GARNER

Court Clerk:
J. O. McMINN
A. R. SUGG (Re-election)

For County Weigher:
O. J. LEE (Re-election).
JOHN WARD

For County Judge:
OREL BUSBY (Re-election)
J. O. COWART

For Representative:
T. V. B. MULLINAX
M. L. CHAMBERS

W. H. EREY
DATE CRAWFORD
W. C. DUNCAN

For County Superintendent:
A. FLOYD (Re-Election)

For Co. Commissioner, 1st District:
W. H. BRUMLEY (Re-Election)

For County Commissioner (2nd Dist):
R. L. MOSS
J. I. LAUGHLIN
W. B. SELFREDGE

County Commissioner, 3rd Dist.:
HENRY F. BIBB
W. H. BRENTS (Re-election)

For Constable, Ada Precinct:
WALTER GOYNE
(Re-Election)

AMERICANS CAPTURE THOUSAND GERMANS

London, July 16.—Andrew Bonar Law, Chancellor of the Exchequer, announced in the House of Commons tonight that the Americans had captured 1,000 or more prisoners south of the Marne after having backed the enemy. Mr. Bonar Law read the following communication to the House: "The enemy attacked early this morning on a front of ninety kilometers, pretty evenly divided east and west of Rheims. The city itself was not attacked. "West of Rheims the Germans penetrated on a front of thirty-six kilometers (22.73 miles) to an average depth of from four to five kilometers. "South of the Marne, by a brilliant counter-attack, the American troops drove the enemy back and took 1,000 or more prisoners. "East of Rheims the enemy has been heavily repulsed and has suffered a complete check. "Sir Walter Runciman said the House would wish to offer congratulations not only to the French, but to the American troops, who had justified themselves, not for the first time, on a critical occasion. Before reading the communication Bonar Law said it had reached him from the front shortly before 11 o'clock. "I may add," he said, "that the Prime Minister has been in telegraphic communication with headquarters and the report given to him as coming from General Foch is that he is well satisfied with the results of today's fighting."

EVENTS OF THE DAY AT NORMAL

ARMY OFFICER REQUESTED TO GIVE MILITARY DRILL NEXT TERM.

Saturday the normal held a celebration of July 14, the French date corresponding with our 4th of July, being the anniversary of the fall of the Bastille, marking the first move in the French revolution. Features of the program were an address by Prof. R. G. Sears, singing of the Marseillaise by the class in French and other interesting numbers. Appropriate resolutions were prepared and presented to the various churches in the city for adoption Sunday and to be forwarded to the French nation.

Being fully alive to the necessity of military drill, President Gordon has taken up with the war department, through Congressman McKeown and Senator Owen, the matter of having a commandant appointed for the normal, as in the case of regular military schools such as A. & M. colleges. There is every reason to believe the request will be granted. The drill during the summer term has proved very successful and both girls and boys can execute the drill and go through the manual of arms splendidly. In this line of work two or three members of the normal faculty and some students will leave shortly for Camp Fort Sheridan, Illinois, where they will take a course in the training camp.

The county superintendents of the various counties composing this normal school district and a number of other prominent educators of the district were in conference this afternoon to discuss the educational interests of the East Central district. One of the things discussed concerns the closer articulation of work done by the normal and high schools of the district. The educators want to make it possible for a good student to be graduated in three years by putting in summers at the normal and also get first grade state certificate. The committee to work out the plan is composed of Prof. M. L. Perkins of East Central normal, A. B. Enil, Henryetta and N. S. Cowart of Holdenville.

Following is the list of those attending the conference: County Superintendents R. G. Creekmore, Okmulgee; Mrs. T. D. D. Quaid, (acting) Johnston; J. M. Cusenberry, Coal; V. H. Durham, Hughes; E. W. Cromwell, Garvin; A. Floyd, Pontotoc; Geo. F. Durham, Okfuskee; Nola Hill Wilson, Murray; Blanche Beatrice Ward, McClain. City Superintendents and others: J. A. Lemon, Stratford; A. P. Lever, Coalgate; A. B. Herving, Wynnewood; John T. Heffey, Henryetta; T. T. Montgomery, late of Madill, secretary State Board of Education; J. M. Burton, Shawnee.

Another matter is the reading circle work of the district. The state board of education on recommendation of the normal school presidents has adopted a group of books for the reading circle course throughout the state. There are three groups of these, the first embracing current history, another community civics and the third pedagogy. The reading course will be supervised by the normal school and on completion of same teachers will be given credit for the work.

This evening at 7 o'clock the girls will repeat their military drill given on July 4, this time in honor of the visiting superintendents and visitors. The public is cordially invited to be present.

German Humor.

(By the Associated Press)

Amsterdam, July 16.—A cartoon in the latest issue of the German comic paper Jugend pictures a German air-raid on New York. The scene is a New York roof-garden, from which the sky is shown ablaze with bombs, shrapnel and fighting planes. An American "multi-millionaire" is shown escorting his richly-clad wife, who is said to be "shrinking in terror before the apparition in the sky." He reassures her by saying soothingly: "Well, my dear, you have always been keen on having the latest Parisian novelties. Now you've got them!"

The Disturber.

DADDY'S EVENING FAIRY TALE

by MARY GRAHAM BOWEN

REDDY RACCOON'S FAMILY.

Now Reddy Raccoon and his family lived high up in a tree without any leaves even in the summer time. He liked a dead tree best. He didn't care at all about pine trees that stayed handsome and green all the year around. He didn't think leaves were pretty and fresh and green, nor did he rave about them when they turned into gorgeous shades of yellow and golden, orange and flaming red.

"You know," he said, "I'm not the only one who feels this way about trees. My family are the same way, to be sure, but so are all my relations. Even our cousins in the zoo are given a tree without leaves—a tree that looks like a great pole except that it has knotty branches." "It's a fine home we have," said Mrs. Reddy. "We have a sun parlor, sleeping room and living room where we can chat and talk in our own raccoon language, which is so beautiful."

"I'm glad you're pleased," said Reddy with a broad smile.

"Have you begun the lessons yet?" he asked after a moment.

"I'm going to begin this very morning," said Mrs. Reddy.

"What are you going to teach us, mother?" asked the little raccoons.

"I'm going to show you how to eat your food and how to enjoy it best by breaking up bread and other solid foods into whatever we have to drink. You will love nice, soft dishes, for all raccoons always have. And I will tell you a secret, children."

"Yes," whispered the children, for they loved hearing a secret in lesson time. "Do tell us," they agreed.

"We are supposed to be very clean and neat, and so we are, but we're not quite as particular as folks think."

"That's so," chimed in Reddy. "Dear Mother Reddy—how much you do know."

Mrs. Reddy looked at him fondly and then said to the children: "You see, dears, that because we love to mix our food in water they think (the people I mean) that we are washing it and that we won't eat dirty food."

Following is the list of those attending the conference: County Superintendents R. G. Creekmore, Okmulgee; Mrs. T. D. D. Quaid, (acting) Johnston; J. M. Cusenberry, Coal; V. H. Durham, Hughes; E. W. Cromwell, Garvin; A. Floyd, Pontotoc; Geo. F. Durham, Okfuskee; Nola Hill Wilson, Murray; Blanche Beatrice Ward, McClain. City Superintendents and others: J. A. Lemon, Stratford; A. P. Lever, Coalgate; A. B. Herving, Wynnewood; John T. Heffey, Henryetta; T. T. Montgomery, late of Madill, secretary State Board of Education; J. M. Burton, Shawnee.

Another matter is the reading circle work of the district. The state board of education on recommendation of the normal school presidents has adopted a group of books for the reading circle course throughout the state. There are three groups of these, the first embracing current history, another community civics and the third pedagogy. The reading course will be supervised by the normal school and on completion of same teachers will be given credit for the work.

This evening at 7 o'clock the girls will repeat their military drill given on July 4, this time in honor of the visiting superintendents and visitors. The public is cordially invited to be present.

United States closes its first fiscal year as a participant in the war with a trade balance of approximately \$3,000,000,000.

Brazil plans the establishment of agricultural stations, especially for the education of orphans and abandoned children.

Australia is experimenting with a mammoth oil driven harvester that strips grain fields at a rate of about sixty acres a day.

The News has three or four very interesting letters from soldiers which will be run tomorrow or next day. An unusual rush at the office today made it impossible to run them in this issue.

GERMAN LABOR CONDITIONS GROW STEADILY WORSE

Amsterdam, July 16.—(Correspondence of The Associated Press)—What the Berlin Vorwaerts terms "criminal sapping of the nation's strength" is revealed by the returns of the "labor inspectorate for Prussia" for 1917.

These statistics have not appeared during wartime and socialists have long and vainly urged their issuance. The Prussian Board of Trade finally yielded and last year's figures have just been made public. Issued without text they are eloquent in themselves as they show increase use of the labor of women and children which, Vorwaerts says, "will exact a fearful revenge on the future race."

Compared with pre-war statistics male employees over sixteen decreased from 2,662,152 to 1,956,202, but women employees increased 687,734 to 1,240,593. Employees fourteen to sixteen years old increased 280,148 to 327,904 and children under fourteen, 3,584 to 6,012.

In engineering workshops alone the number of women increased from 51,513 to 327,512.

Cases of infractions of the workmen's protection act have grown alarmingly. By the emergency law of 1915, employers were granted exemptions which have been scandalously abused. Cases of exceeding the ten hours working day rule for women, rose from 2,869 to 6,108; suppressions of the legal luncheon interval, from 3,733 to 9,292 non-observance of the prohibition of night work 727 to 13,398; and non-observance of the prohibition of juvenile labor 162 to 1,209.

"The number of official inspections of factories having notably decreased, it is safe to say," adds Vorwaerts, "that law breaking in this respect has assumed gigantic proportions" and the paper vehemently complains of the excessive indulgence shown to employers by the authorities who, for instance, granted permission for overwork by women to the extent of 23,000,000 hours compared with 15,000,000 in 1916, and for nightwork by women to the total of 44,000,000 hours, compared with 25,000,000.

The two-shift system is still prevalent while three-shifts are comparatively rare.

Vorwaerts demands instant measures to counteract these abuses and the abolition of the exemption law.

JUDGE R. E. CAMPBELL RESIGNS FROM BENCH

Muskogee, Ok., July 16.—Judge Ralph E. Campbell of the United States Court for the Eastern District of Oklahoma, today sent his resignation to Washington, to become chief counsel of a large oil producing company.

Judge Ralph E. Campbell obtained a nation-wide reputation as a jurist because of the wide range of the classes of litigation which came before him. It is a matter of record that the Eastern Judicial District of Oklahoma ranks second in the United States in volume of litigation and in the number of cases docketed. It probably ranks first in total value of property litigation. This is caused largely by the tremendous oil activity in the district and is rendered complex by the nature of the laws of the state which were framed to meet a peculiar condition created by the presence and the rights of the Indian tribes living here.

Judge Campbell was appointed by President Roosevelt in 1907. It was during the height of the oil activity that Judge Campbell took his place on the bench and almost immediately his court became flooded with suits, in law and equity in which titles to valuable oil lands came into dispute. In addition to such cases, the criminal branch of the court was much occupied with consideration of cases involving transgression of the laws governing the introduction of liquor into Indian Territory.

Rumania is a desolate and barren country today—an awful object lesson of the cost of war. Two years ago it was one of the garden countries of the world, teeming with agricultural wealth and prosperity.

SPECIAL

In an "Arctic Breeze" suit you will forget that it is hot and be as cool as the man in the Arctic region.

\$18.00 Values, Silk Mohair, dark blue with corded stripes. Special -----\$18.95

\$12.50 Value. A beautiful gray in stout sizes for the large man. Special -----\$10.95

Come in today and inspect these wonderful values. "A fit or no sale."

MOSER'S DEPARTMENT STORE

Tax records in one county in Kansas shows that it has a population of 6,000 dogs, which consume enough food each day to feed 1,000 Belgian orphans, or \$34 a year a dog. The county has only 2,000 sheep. A sheep can be raised for the cost of a dog. It is just as good a pet as a dog, and will yield \$5 worth of wool yearly and \$10 worth of meat when killed, as against a merely nominal killing value on dogs in case their hides are turned into gloves. These striking figures are used as a plea for fewer dogs and more sheep. The replacement of these dogs with sheep would save \$18,000 worth of food a year for that county alone.—Scientific American.

Learn to Dry Food—Uncle Sam Will Teach You

The government publication shown here explains drying of fruits and vegetables—a method of food conservation doubly important this year. Drying is easy to do, calls for simple equipment, and requires no sugar. Methods tested and proved good by Government specialists are explained in this bulletin, a copy of which belongs to every American housewife.
